

## Configuring OSX VPN for the Network

### Download and install Tunnelblick Client

- Download the latest version Tunnelblick for MAC from <https://tunnelblick.net/downloads.html>

- Put the file in the **Applications** folder and Install the file Tunnelblick.\*.dmg file.

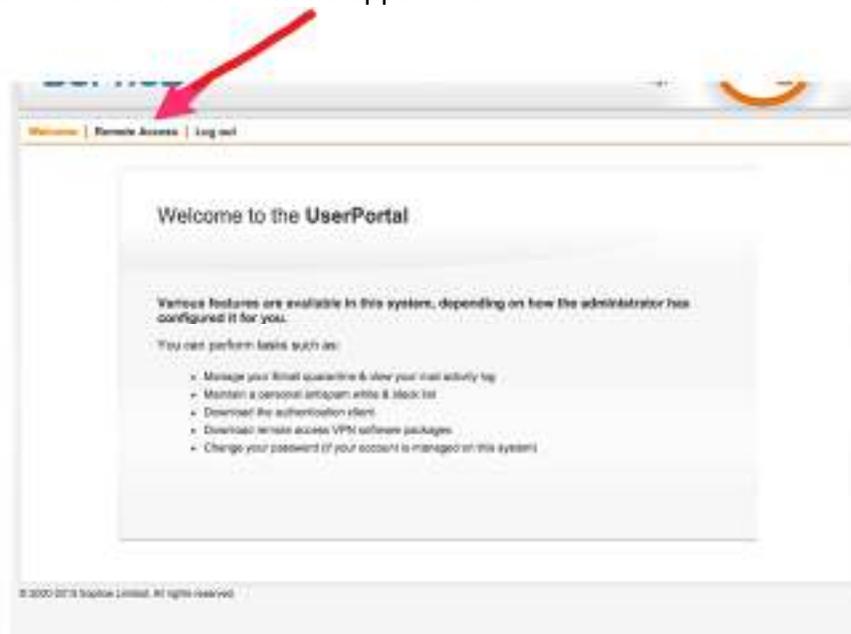

-

## Configuring OSX VPN for the Network

- Log into the Sophos User Portal using your Domain credentials

- Click on “Remote Access” in the upper left.

- Select the third option—to download a zip file all necessary configuration files.

# Configuring OSX VPN for the Network

- You will see **Connected** at the top of the screen.

\*\*If you get any errors when trying to connect, quit Tunnelblick. Open Disk Utility and Repair Permissions. Then reboot your machine and try again.
